

获取LVGL库源码

LVGL是一个开源项目，因此获取LVGL的源码非常简单，可以在LVGL的GitHub源码仓库获取源码，地址：<https://github.com/lvgl/lvgl>

打开仓库之后，按下图所示点击Releases按钮：

进入Release页面之后，选择相应的版本，我们课程使用的是9.1.0版本，点击即可下载源码压缩包（zip和tar.gz的内容是一样的，区别是压缩格式不一样而已）：

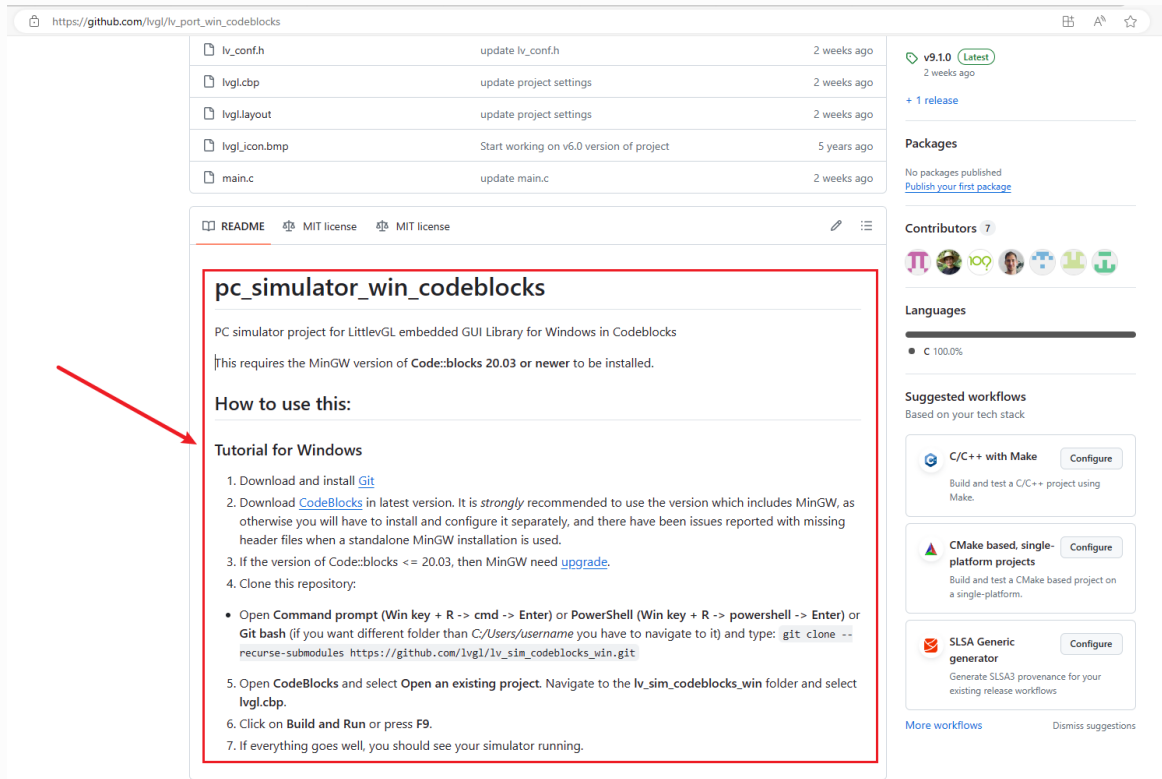

获取LVGL Code::Block工程源码

我们学习资料包中事先给大家准备好了一份LVGL Code::Block 工程源码，这份工程能直接使用，也是我们课程配套的工程，如果你想知道怎么从LVGL官方仓库获取到这个工程，请看这里的步骤：

1. 使用浏览器打开LVGL Code::Block工程源码git仓库地址：https://github.com/lvgl/lv_port_win_codeblocks
2. 获取源码有两种操作：

1. 第一种方法：查看该仓库的README文档按照该文档进行操作获取：

https://github.com/lvgl/lvgl_port_win_codeblocks

pc_simulator_win_codeblocks

PC simulator project for LittlevGL embedded GUI Library for Windows in Codeblocks

This requires the MinGW version of **Code::blocks 20.03 or newer** to be installed.

How to use this:

Tutorial for Windows

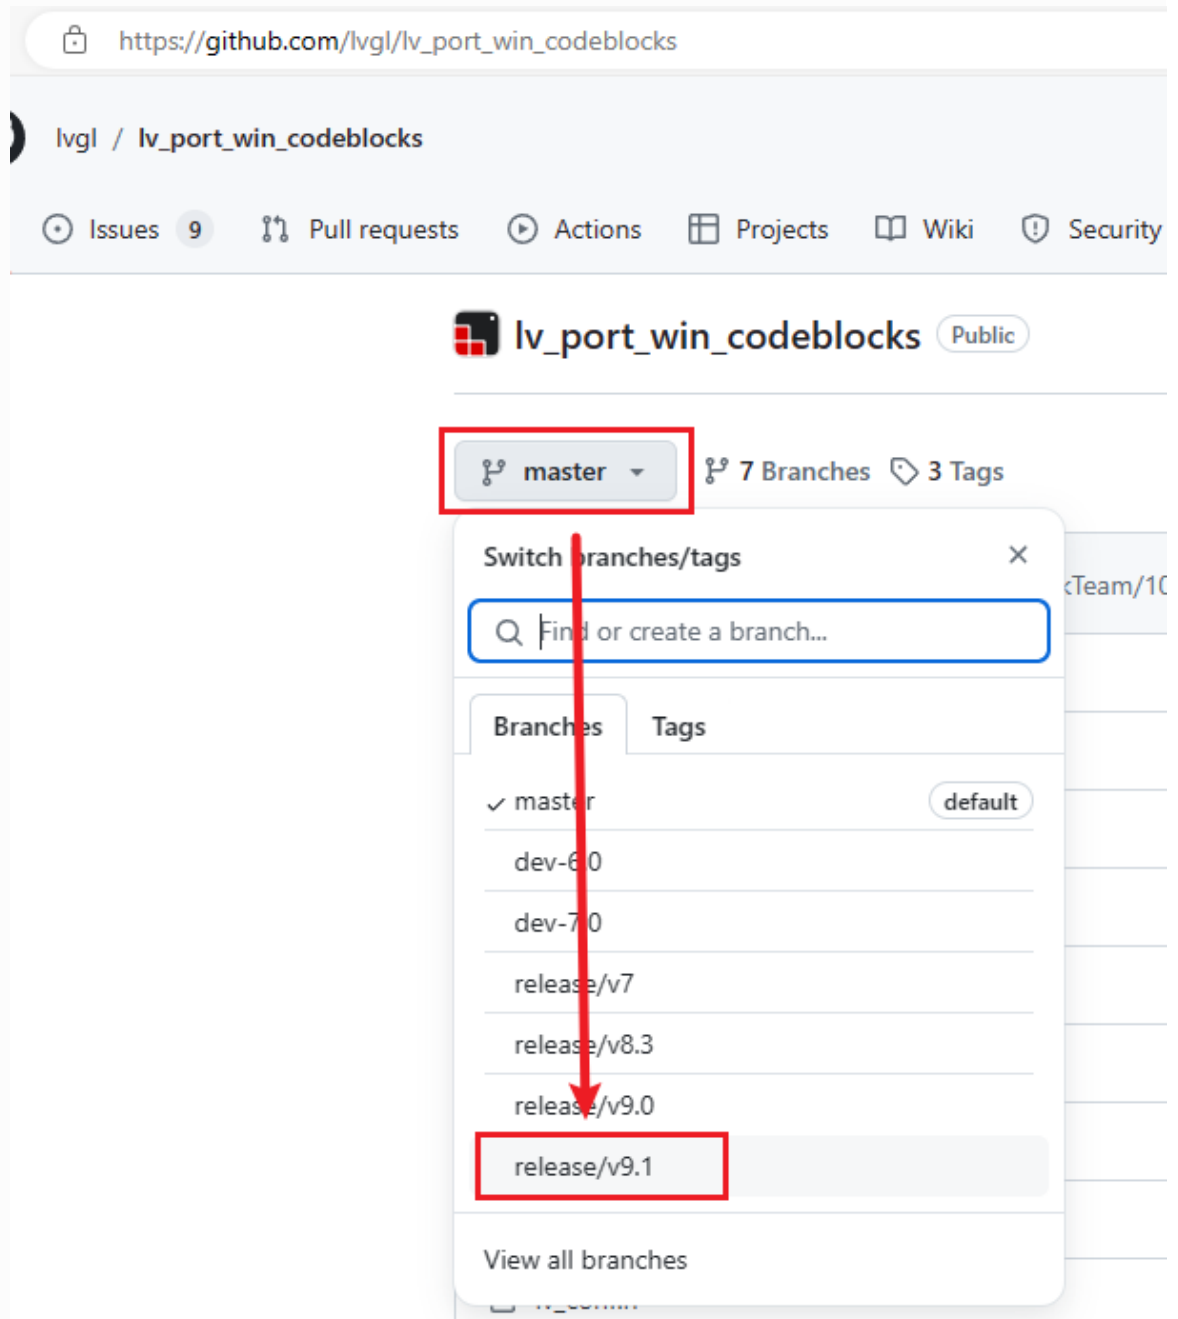

1. Download and install [Git](#)
2. Download [CodeBlocks](#) in latest version. It is *strongly* recommended to use the version which includes MinGW, as otherwise you will have to install and configure it separately, and there have been issues reported with missing header files when a standalone MinGW installation is used.
3. If the version of Code::blocks <= 20.03, then MinGW need [upgrade](#).
4. Clone this repository:
 - Open **Command prompt** (Win key + R -> cmd -> Enter) or **PowerShell** (Win key + R -> powershell -> Enter) or **Git bash** (if you want different folder than C:/Users/username you have to navigate to it) and type: `git clone --recurse-submodules https://github.com/lvgl/lvgl_sim_codeblocks_win.git`
5. Open **CodeBlocks** and select **Open an existing project**. Navigate to the `lv_sim_codeblocks_win` folder and select `lvgl.cbp`.
6. Click on **Build and Run** or press **F9**.
7. If everything goes well, you should see your simulator running.

Right sidebar:

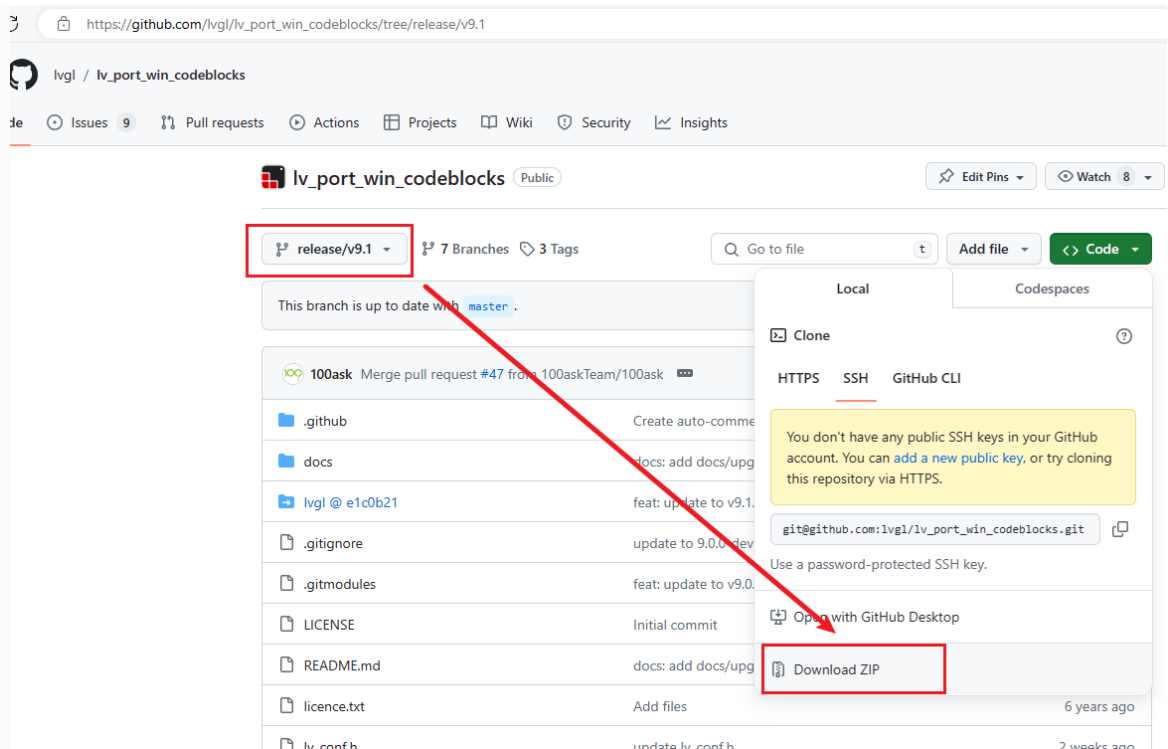

- Releases:** v9.1.0 (Latest) 2 weeks ago, + 1 release
- Packages:** No packages published, [Publish your first package](#)

- Languages:** C 100.0%
- Suggested workflows:** Based on your tech stack
 - C/C++ with Make:** Build and test a C/C++ project using Make. [Configure](#)
 - CMake based, single-platform projects:** Build and test a CMake based project on a single-platform. [Configure](#)
 - SLSA Generic generator:** Generate SLSA3 provenance for your existing release workflows. [Configure](#)

2. 第二种方法：

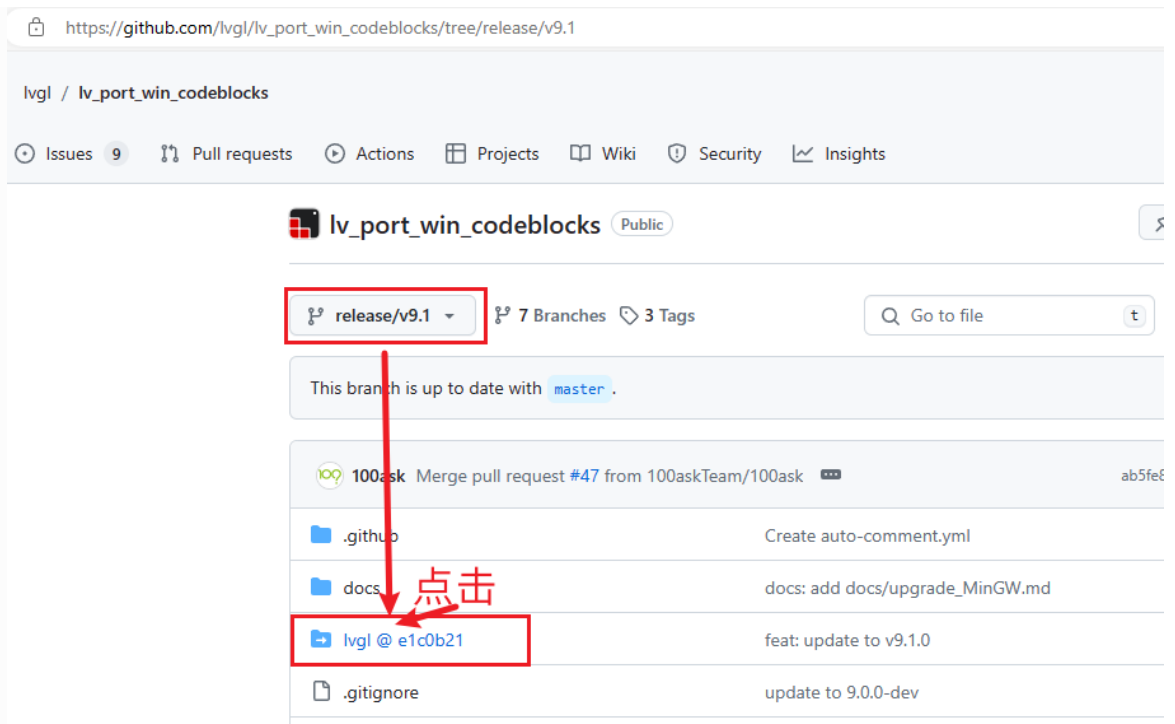

打开仓库之后按照下图所示选择分支：

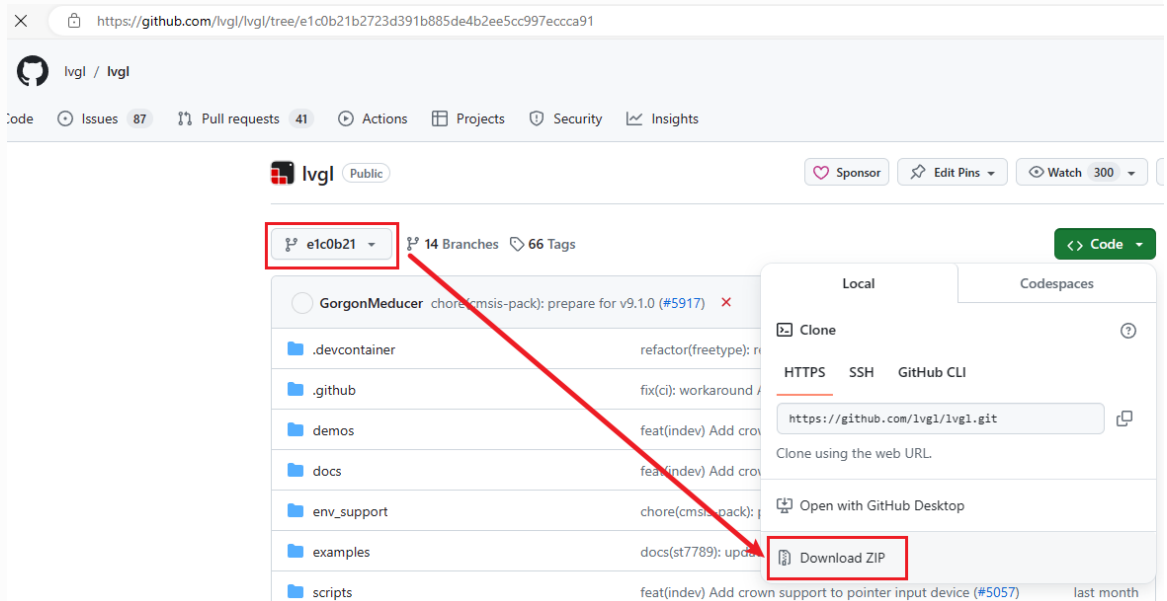

选择分支之后，等待页面刷新，然后按下图所示点击下载压缩包：

下载下来的压缩包解压之后会发现其中 lvgl 文件夹是空的，这个时候需要按照下图下载对应版本的 lvgl 源码压缩包，如下图所示：

点击之后会跳转到LVGL源码仓库，按照前面的操作那样下载压缩包即可：

将下载得到lvgl源码压缩包中的内容解压到 LVGL Code::Block工程的 lvgl 目录下：
